next to nothing to play them on my iOS devices. Songbird has its own set of controls, along with the standard iTunes controls. It offers the same kind of iCloud integration and synchronization as iTunes. All the iTunes Music Store features are built-in. And in our tests, it managed to smoothly playback our library of MP3 files. The combination of standalone iOS integration and easy transfer to and from your Mac or PC iTunes music library is the reason I switched to Songbird. If you're a reluctant iTunes user, or if you've tried iTunes but find it lacking, you'll find some reason to switch too. With all those features, however, Songbird doesn't have iTunes' extensive music library syncing and content searching functions. The interface is clean and easy to navigate.

Songbird can run as a standalone app in your Mac's dock, in your browser window, or on an Android device using its new mobile app, but I've been using the app most of all for music playback and file transfer. Android Device Support — Songbird has built-in support for Android devices and can sync over the network or your computer's file system. iOS Support — Songbird supports iOS devices and can sync over the network or your computer's file system. Safari Browser Plug-in — The desktop app is basically a web browser with a plug-in. Songbird is designed to integrate with your browser and supports most of the web standards and most browsers out there. My little search tool shows that it supports more than three million songs, and that's a vast improvement over iTunes' own library feature. Songbird even worked with my old iPod, a device I'd left behind as a concession to Apple's overpriced iTunes music store and wishy-washy Apple Music. The interface is clean and easy to navigate.

In addition to the free iOS version, which is free to download and can sync your music library, Songbird can also run as a standalone app in your Mac's dock, in your browser window, or on an Android device using its new mobile app, but I've been using the app most of all for music playback and file transfer. Synchronization is easy and works well for most users. But the iCloud Music Library is missing from the list of supported music libraries. If you have an iOS device with iCloud, or if you have a Dropbox account, Songbird will sync your library to both. Songbird does have 82157476af
